MD. EMON MIAH

Full Stack Mobile & Backend Developer

Flutter · Laravel · Go · Python · Real-time Systems

- Phone: +8801405665854 / +8801568147387
- Email: contact.mdemonmiah@gmail.com

- LinkedIn: https://www.linkedin.com/in/MdEmonMiah
- Location: Uttara, Dhaka, Bangladesh

Professional Summary

Full Stack Engineer specializing in high performance Flutter applications and scalable backend systems. Proven experience in designing real time architectures using WebSocket, building fintech, healthcare, live streaming and e-commerce platforms. Strong focus on clean architecture, modular code and production ready system design.

Professional Experience

N. I. Biz Soft, Uttara-15 (Dec 2023 – May 2026)

Senior Software Engineer (Mobile & Backend)

- Leading full stack system development (Flutter + Backend)
- Designing scalable real time architectures (WebSocket based systems)
- Backend development in Go (Gin), Laravel & Django
- System design for fintech, e-commerce and live streaming platforms
- API architecture design & performance optimization
- Mentoring junior developers and reviewing code structure
- Handling production level deployments and system stability

Mid-Level Mobile & Backend Developer

- Worked as Full Stack (Flutter + Backend) developer
- Built scalable API integrations with backend systems
- Implemented real time features using WebSocket (Go)
- Payment gateway integration (bKash, Nagad, SSLCommerz)
- Improved app performance & backend response time
- Collaborated on system level architecture decisions

App Developer

- Flutter mobile application development (Android & iOS)
- REST API integration and UI implementation
- State management (GetX / Provider)
- Bug fixing, feature implementation and app maintenance
- Clean architecture basics (Service + Repository pattern)

Technical Skills

1. Mobile App Development (Flutter)

- Cross platform app development (Android & iOS)
- Clean Architecture (Layered, Scalable, Maintainable)
- MVC, MVVM design patterns
- API Integration (REST, Dio, HTTP)
- Performance optimization & reusable components

2. State Management (Flutter)

- GetX (Advanced): Reactive state management, Dependency Injection, Route management
- Provider (Advanced): Scalable state handling, App-wide state management
- Riverpod (Mid Level): Scalable state handling, Big project and multi state handling

3. Local Storage (Flutter)

- SQLite (Sqflite): Structured relational local database, Complex query handling, Data persistence with schema design

- SharedPreferences: Key value storage, Lightweight data persistence (tokens, settings)

4. Backend Development

- Go (Golang) – Gin Framework: REST API development, WebSocket (real-time system), Middleware, routing, error handling, Concurrent system design
- PHP (Laravel): MVC architecture, Repository architecture, REST API development, Authentication & authorization, ERP & E-commerce system, Blade, Ajax
- Python: Django (backend, REST API & Template Based), Flask

5. Database Systems

- MySQL: Relational database design & query optimization
- Firebase: Firestore & Realtime Database

6. System Design & Integration

- Real time systems (WebSocket, event pipelines)
- Payment gateway integration: bKash, Nagad, Stripe, PayPal, SSLCommerz
- OTP & token based authentication (JWT, OAuth)
- API security & performance optimization

7. Tools & Environment

- VS Code, Android Studio, Xcode, Git, Postman, Docker (Basic)

Key Projects

1. Live Streaming Platform

- Live App: https://play.google.com/store/apps/details?id=com.swish.app
- Platform: Flutter App + Go Backend (Microservices Architecture)
- Role: Full Stack Engineer (Flutter + Go Microservice Backend)
- System Architecture: Separate Go based microservices (API Server + Streaming Core Backend), WebSocket real-time communication system, scalable event-driven architecture for live interactions.
- Core Features: Real-time audio/video live streaming, live room join/leave system, host-controlled join request approval, VIP instant join & premium access, gift sending & virtual economy, live ranking with entry animations, real-time viewer tracking, high performance concurrency handling via Go routines.

2. LA'AM ERP System (Enterprise Resource Planning)

- Live Web System: https://erpecom.deepverselab.com/login
- Platform: Web System + Backend
- Role: System Architect & Backend Developer
- Core Modules: Employee Management System (Role-based access control), team permissions, incentive system per employee & product, courier integration & auto-tracking, weight-based shipping calculation, inventory management, accounting module (income, expense, profit/loss), employee wallet system, full business analytics dashboard.
- Integrations: WordPress plugin integration (order sync), direct ERP pipeline, real-time inventory synchronization.

3. Xovalley – Multi Vendor E-commerce Platform

- Live Web: https://xovalley.com
- Live App: https://play.google.com/store/apps/details?id=com.xovalley.user_app
- Platform: Web + Mobile + Admin + Delivery System
- Backend: Laravel (API + Core Business Logic) + React.js Frontend
- Mobile: Flutter (Customer App, Seller App, Delivery Man App)
- Role: Full Stack Engineer (Laravel + Flutter + System Design)
- Features: Multi vendor marketplace, product/cart/order management, delivery tracking, affiliate marketing, commission & payout system, payment gateway integrations.

4. ARACO Healthcare System

- Live Web: https://araco.com.bd
- Platform: Flutter App + Web System
- Backend: Django + Template based Admin Panel
- Mobile App (Flutter + GetX): Online pharmacy (medicine order + prescription upload), doctor appointments & telemedicine, video/audio calling (Zego Cloud), lab test booking, caregiver booking, health package subscriptions.
- Workflow & Admin: Patient consultation flow, home collection digital report delivery, RBAC, POS system, inventory, and invoice generation.
- Role: Full Stack Engineer (Flutter + Django + System Design)

5. Propeta – Real Estate Platform

- Platform: Flutter App + API Backend
- Features: Property listing system, property search & filtering, agent-based listing, API-driven architecture, MVC backend structure.
- Role: Full Stack Engineer (Flutter + Django + System Design)

6. CashMart – Digital Banking + E-commerce System

- Platform: Flutter App + Django (Python) Backend
- Features: Send money, cashout via QR, transaction history with PDF export, OTP authentication, wallet system, product purchase, profit sharing earning logic, MLM style deposit & rewards.
- Role: Backend Engineer (Django API Development) & Mobile Developer

Education

- BSc in Computer Science & Engineering (CSE) — Uttara University (Running)
- Diploma in Engineering — Sylhet Polytechnic Institute (CGPA: 3.68 / 4.00)
- HSC — M.A.H.K Bhashani Degree College (GPA: 4.33 / 5.00)
- SSC — P.T.M High School (GPA: 4.33 / 5.00)

Professional Training

- Mobile Application Development (Flutter) — Atova Technology (Aug 2023 – Nov 2023)

Languages

- Bangla: Native
- English: Fluent
